1200 meters Sea-Dweller diving test.

A fellow Rolex owner decided in the frame of his job to test his freshly bought Sea-Dweller. Working in a french petroleum company he decided to test his watch in Angola waters.
All pictures credit - Pol Palacios.

1- Preparing for 1'30 deep dive in Angola waters. Sea-Dweller is fixed on a soft metal plate.

2- Some words as a souvenir. Oups wrong year date pall

3- Ready for diving in a few minutes....

4- A view of the ROV (Remote Operated Vehicle).

5- The Sea-Dweller on all remote control screens.

6- Look at the screen, the Rolex reached 1200 meters, that is a pressure on the crystal of about 1200kgs. Sea-Dweller where it belong... deep sea.

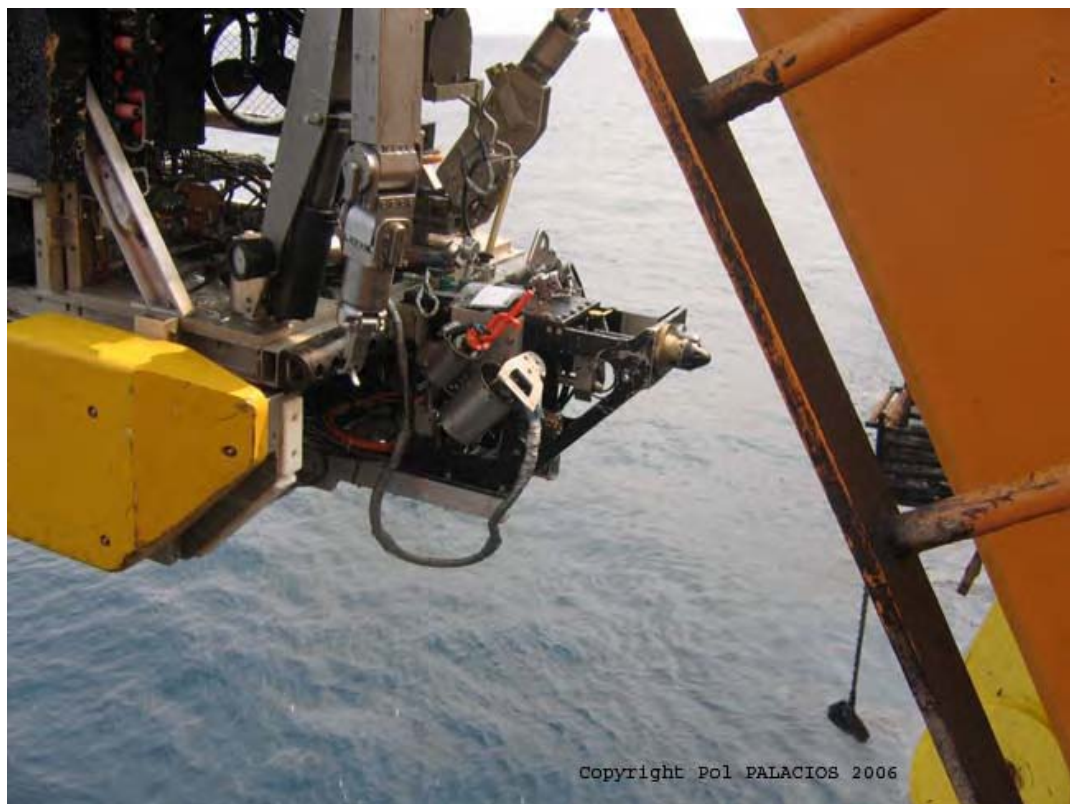

7- The robot arm of the TOTAL ROV.

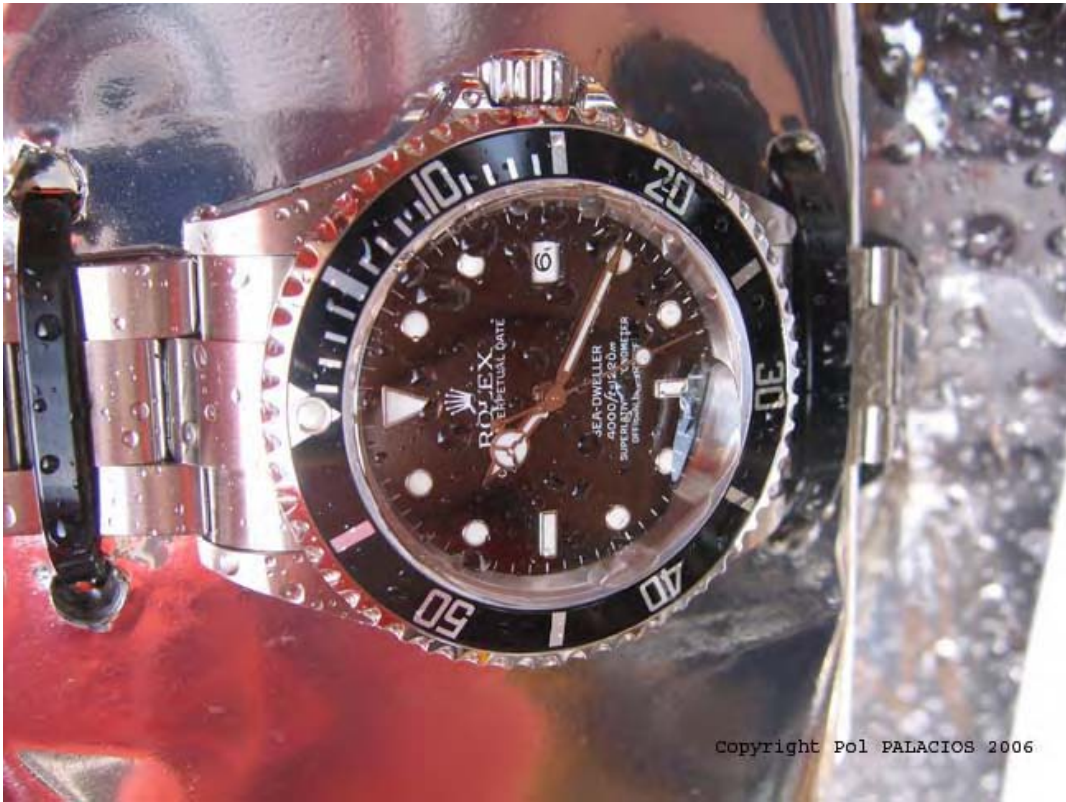

8- Coming back to the surface from the dark, Luminova is working at 257meters.

9- The Sea-Dweller...?

10- Alive and well, the SD kept good time and did the job.

Copyright Pol PALACIOS 2006

11- The SD can go back on the owner's wrist!
